Introduction

What does it do?

Simpleviewer is a image viewer based on flash. It renders a configurable amount of thumbnails and a detail view. It can also operate in full screen mode.

You have to download and install the simpleViewer flash package manually from the simpleViewer homepage. See section installation for details.

Screenshots

Users manual

All you have to do as an user is to insert a gallery element on your page and select the appropriate theme.

Installation

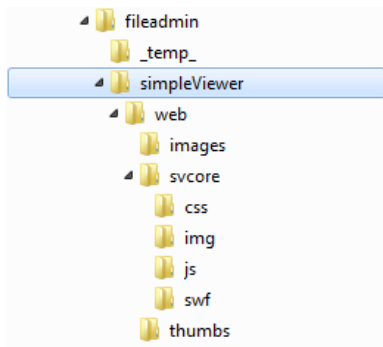

Step 1: Install the extension.

Download and install the extension yag_theme_simpleviewer from TER.

Step 2: Upload the simpleViewer package to your server

Because it is not allowed to redistribute the simpleViewer package within this theme, you have to download it manually from the simpleViewer website and upload it to your server.

Download the simpleViewer .zip package from <http://simpleviewer.net/simpleviewer/> extract it and upload the files to your server – eg to the directory “fileadmin/simpleViewer”. The directory tree then should look like this:

If you want to install the package in an other directory, you have to set the path to this directory in the extension settings in the extension manager:

Extension Manager
Extension: **YAG Theme Simpleviewer** (yag_theme_simpleviewer)

Current status:

The extension is installed (loaded and running)!
Click here to remove the extension:

Configuration:

(Notice: You may need to clear the cache after the configuration of the extension. This is required if the extension adds TypoScript depending on these settings.)

Simpleviewer package path [simpleViewerSourcePath]
Because it is not allowed to redistribute the simpleviewer package, you have to download it manually from <http://simpleviewer.net/simpleviewer/> and extract it somewhere on your server (eg into the fileadmin). Set the path to the root directory of the simpleviewer package here without trailing slash.
For further information have a look to the manual.

 **Change the path to your directory**

Administration

Inserting static templates

After installing the extension, you have to include the static template on the page, where you want to use the themes.

Include static (from extensions):

Configuration

All parameters of simpleViewer can be set via constant editor or typoscript. They are named like the javascript properties.

For a description see: http://simpleviewer.net/simpleviewer/support/standard_options.html.

ChangeLog
